# A SYSTOLIC ALGORITHM FOR INTEGER GCD COMPUTATION 

R. P. BRENT AND H. T. KUNG

#### Abstract

It is shown that the greatest common divisor of two $n$-bit integers (given in the usual binary representation) can be computed in time $O(n)$ on a linear systolic array of $O(n)$ cells.

## Comments

Only the Abstract is given here. The full paper appeared as [3]. The method used is a variant of the binary Euclidean algorithms considered earlier in [1]. For the extended integer GCD problem, see [5]. The (easier) polynomial GCD problem is considered in [2, 4].
